

CLIMBING GYM REVENUE ANALYSIS

Objectives

This project was performed in order to understand how membership types, attendance behavior, and facility usage impact revenue and customer churn, in order to identify opportunities to improve this particular climbing gym's business strategy.

Specific Business Questions

- Is there a seasonal pattern of attendance through the year?
 - Which membership types generate the most revenue?
 - When is the gym most crowded? By which type of members?
-

Insights

1. Seasonal drops

The months of June–July and December show the lowest revenue levels

2. After-work usage pattern

The climbing gym experiences its highest attendance between 17:00 and 21:00

3. Consistent engagement

Annual and Monthly memberships account for the highest overall gym attendance

4. Highest monthly revenue

Punch Card memberships generate the highest average monthly revenue

Opportunities & Actions

The following recommendations are proposed to address identified demand gaps, optimize gym utilization across time periods, and maximize revenue generation through targeted engagement strategies.

1. Handling seasonal demand drops

Mitigate seasonal demand drops during summer (June–July) and Christmas (December) holidays by introducing seasonal activity programs, such as climbing camps or winter/summer schools for children. This could increase youth participation and indirectly boost parental attendance.

2. Off-peak utilization

Increase off-peak utilization by promoting morning attendance through discounted off-peak pricing across all membership types, helping to distribute demand more evenly throughout the day.

3. Referral programme

Launch a referral program in which Annual members can invite a friend, offering the referred customer a discounted Punch Card membership. This strategy leverages highly engaged customers to acquire high-value new users.
